## Improper integrals: infinite integrals §9.2.2

Define integrals like

$$\int_0^{\infty} \frac{1}{1+x^2} dx$$

We first regularize the integral by

$$\int_0^{\varepsilon} \frac{1}{1+x^2} dx, \quad \varepsilon > 0$$

Then we define the integral as a limit

$$\int_0^{\infty} \frac{1}{1+x^2} dx = \lim_{\varepsilon \rightarrow \infty} \left( \int_0^{\varepsilon} \frac{1}{1+x^2} dx \right) = \lim_{\lambda \searrow 0} \left( \int_0^{\frac{1}{\lambda}} \frac{1}{1+x^2} dx \right)$$

So

$$\begin{aligned} \int_0^{\infty} \frac{1}{1+x^2} dx &= \lim_{\varepsilon \rightarrow \infty} \left( \int_0^{\varepsilon} \frac{1}{1+x^2} dx \right) \\ &= \lim_{\varepsilon \rightarrow \infty} (\arctan(\varepsilon) - \arctan(0)) \\ &= \lim_{\varepsilon \rightarrow \infty} (\arctan(\varepsilon)) \\ &= \frac{\pi}{2} \end{aligned}$$

This shows that  $\int_0^\infty \frac{1}{1+x^2} dx$  is a convergent improper integral.  
 ¡INSERT PICTURE HERE!;

## Summary

1. If  $f(x)$  is continuous on  $[a, \infty)$ , then

$$\int_a^\infty f(x) dx = \lim_{\varepsilon \rightarrow \infty} \int_a^\varepsilon f(x) dx$$

2. If  $f(x)$  is continuous on  $(-\infty, \infty)$ , then

$$\int_{-\infty}^\infty f(x) dx = \lim_{\varepsilon \rightarrow -\infty} \int_\varepsilon^c f(x) dx + \lim_{\lambda \rightarrow \infty} \int_c^\lambda f(x) dx$$

## Comparison principle: convergence

### Definition

$$\int_1^\infty e^{-x^2} dx = \lim_{\varepsilon \rightarrow \infty} \int_1^\varepsilon e^{-x^2} dx$$

but we can't compute  $\int_1^\varepsilon e^{-x^2} dx$ .

### Theorem (Comparison Test)

Suppose  $f(x)$  and  $g(x)$  (not magnitude of  $g(x)$ ?) are continuous on  $[a, \infty)$ ,  $|f(x)| \leq g(x)$  for all  $x \in [a, \infty)$ , and  $\int_a^\infty g(x) dx$  converges.

Then  $\int_a^\infty f(x) dx$  also converges

### Proof

If  $|f(x)| \leq g(x)$ , then

$$\left| \int_a^\varepsilon f(x) dx \right| \leq \int_a^\varepsilon |f(x)| dx \leq \int_a^\varepsilon g(x) dx$$

(assuming  $g(x)$  converges)

### Example

Since

$$\left| e^{-x^2} \right| = e^{-x^2} \leq e^{-x}$$

(couldn't we just say it's less than or equal to 1? No, because when we take the limit to infinity, it wouldn't converge!).

and

$$\begin{aligned} \int_1^\infty e^{-x} dx &= \lim_{\varepsilon \rightarrow \infty} \int_1^\varepsilon e^{-x} dx \\ &= \lim_{\varepsilon \rightarrow \infty} (-e^{-\varepsilon} + e^{-1}) \end{aligned}$$

So by the Comparison Test, we conclude that

$$\int_1^\infty e^{-x} dx \text{ is a convergent improper integral}$$

### Example

Determine if the improper integral

$$\int_1^\infty \frac{1}{1 + xe^x} dx$$

converges or diverges.

### Solution

$$\begin{aligned} 1 &\leq x \\ e^x &\leq xe^x \\ e^x &\leq 1 + xe^x \\ \frac{1}{1 + xe^x} &\leq \frac{1}{e^x} \\ \left| \frac{1}{1 + xe^x} \right| &\leq e^{-x} \end{aligned}$$

Since  $\int_1^\infty e^{-x} dx$  is convergent, we deduce from the Comparison test that  $\int_1^\infty \frac{1}{1 + xe^x} dx$  is also convergent.

### Theorem (Comparison Test)

Suppose  $f(x)$  and  $g(x)$  are continuous on  $[a, b)$ ,  $|f(x)| \leq g(x)$  for all  $x \in [a, b)$ , and  $\int_a^b g(x) dx$  converges.

Then

$$\int_a^b f(x) dx \text{ converges.}$$

### Example

$$\int_0^{\frac{\pi}{4}} \frac{\cos(x)}{\sqrt{x}} dx \text{ convergent or not?}$$

### Solution

$$\left| \frac{\cos(x)}{\sqrt{x}} \right| = \frac{1}{\sqrt{x}} |\cos(x)| \leq \frac{1}{\sqrt{x}}$$

$$\begin{aligned} \int_0^{\frac{\pi}{4}} \frac{\cos(x)}{\sqrt{x}} dx &= \lim_{\varepsilon \searrow 0} \int_{\varepsilon}^{\frac{\pi}{4}} \frac{1}{\sqrt{x}} dx \\ &= \lim_{\varepsilon \searrow 0} 2\sqrt{\frac{\pi}{4}} - 2\sqrt{\varepsilon} \\ &= \sqrt{\pi} \end{aligned}$$
